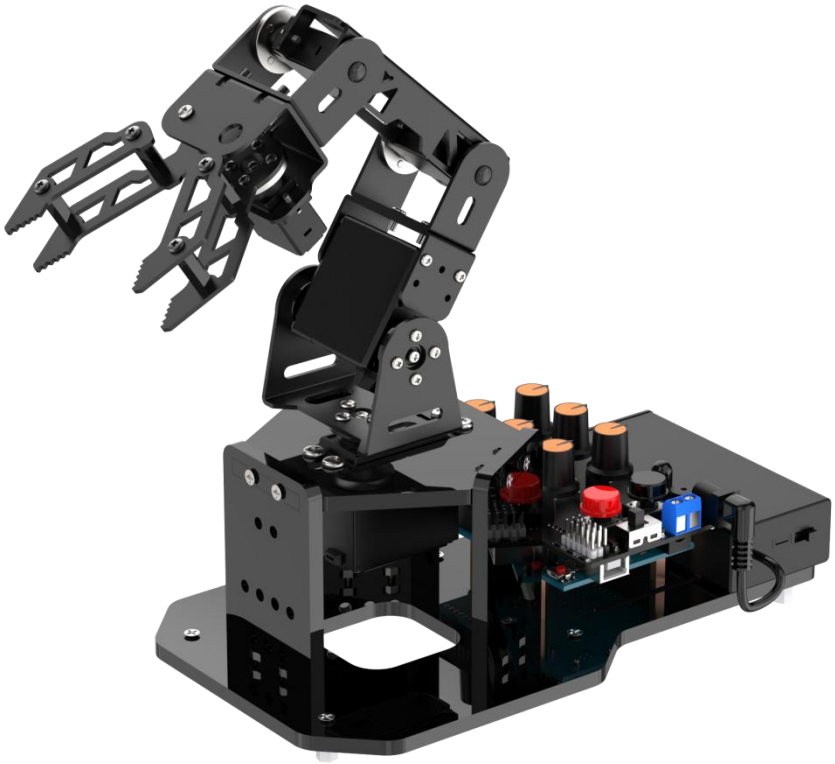
1.1.1 miniArm Introduction

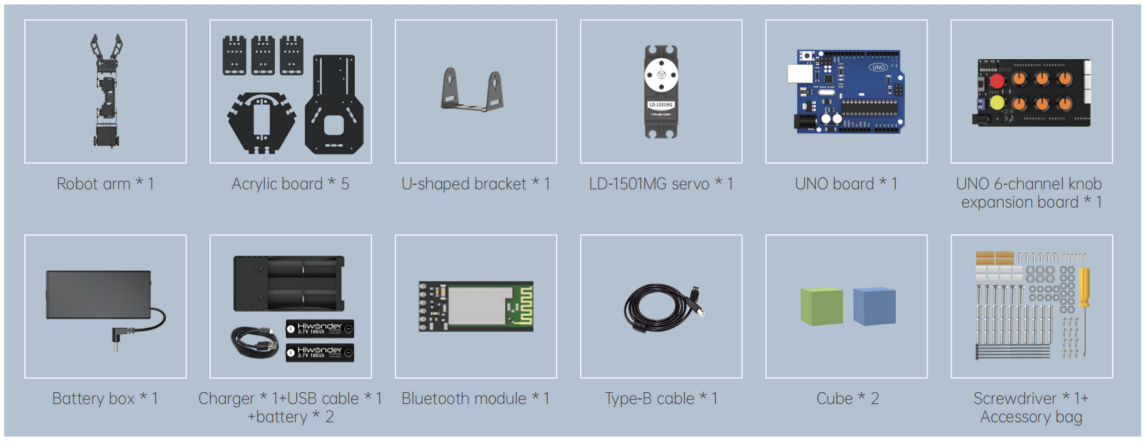
1. Product Introduction

Powered by Arduino UNO development board, miniArm robotic arm uses Arduino for programming. Equipped with UNO 6-channal knob expansion board and Bluetooth module, it can control the robotic arm using knob or app quickly and easily. And using a 7.4V lithium battery allows the robotic arm to be used anywhere.

There are IO and I2C connectors reserved. You can develop more interesting and fun creative projects pairing with sensor expansion kits.



2. Packing List



3. Notes

Instructions on the usage and storage of this product:

- This product contains small components and sharp pins, making it unsuitable for children under 12 years old.
- Minors should use this product under the supervision and guidance of adults.
- This product contains small and sharp parts. Do not swallow or press them to avoid injury.
- This product includes conductive components. Do not touch them with metal objects when the power is on.
- Do not force the robot to move when it is powered on to avoid damage.
- If the product is not used for a long time, please charge the battery fully. Then, remove and store it in a cool and dry place.
